The decapped intact mRNA was ligated with DNA-RNA linker including EcoR is the by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was adjusted to have about 60nt. The CDNA vector was circularized with E. coli DNA ligase after digestion of EcoR which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method: The converted to a DNA strand by Okayama-Berg method: The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2.000 - 3.000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including TY promotor as 5 primer and N(dT)14 as 3 primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with library and isometry and its stranded cDNAs prepared from original

/note="Organ: Stomach; Vector: pT218RP1; Site_1: ECORI; Site_2: Not1: The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR is site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60Mt. The cDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Osayama-Berg method. The obtained CDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched CDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids Dy centrifuge, the subtracted CDNA interference of the removing DNA-RNA hybrids Dy centrified, the subtracted constructed by transformation of the

adjusted to have about outs. The cura vector was circularized with site is also included in vector. An RNA strand converted to a DNA strand by Okayama berg method. The coharted to a DNA strand by Okayama berg method. The obtained cohar vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The coha libraries constructed by this method are full-length enriched cDNA libraries of the cohart in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5 primer and N(dT)14 as 3 primer. PCR products were used as template for synthesis of products were used as template for synthesis of blotinylated single stranded RNA by in vitro transcription reaction. The Synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method."
                        /note="Organ: Stomach; Vector: pT218RP1; Site_1: ECORI; Site_2: NOTI: The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from Oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      277

/note="Organ; Stomach; Vector: pTz18Rp1; Site_1: ECORI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand CNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coll DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coll ToplOF' by electroporation method. The CDNA libraries constructed by this method are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Theres I to 592)

polylinker; Site_I: Not I; Site_2: EcoRI; The MI-P-AYI
library is normalized library derived from the MI-P-AYO
library, ultimately derived from placenta tissue. For a
detailed description of the library from which this clone
was derived, please visit our web site at
http://pigest.genome.lastate.edu/. The procedure used to
create this library has been previously described (Bonaldo
, Lennon and Soares, Genome Research 6: 791-806, 1996)
                                                                                                                                                                                                                                                                                                                          Email: cktuggle@iastate.edu

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Notl site and the oligo-dT track served to verify it as a clone from the normalized placenta library CDNA Library Preparation: M.B. Soares Lab, University of Iowa EST sequencing: M.B. Soares Lab, University of Iowa Clone distribution: clones will be available through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1011 CCTACCCGAATGGGIGGGCATCCCTGCCGATCTGTCCCCACTCCTTAAGGCCATTAACACC 1070

full-length enriched CDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original CDNA library, the abundant CDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single strandad RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method.

/note="Organ: Stomach; Vector: pTz18RP1; Site_1: ECORI; Site_2: Not1; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatuse (BAP) and then decapped with tabacco acid pyrophosphatuse (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR is the by treatment of 4 RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60Ht. The CDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The converted to a DNA strand by Okayama-Berg method. The converted to a DNA strand by Okayama-Berg method are obtained cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2,000 - 3,000 colonias in original cDNA library, the abundant cDNAs library. After analyzing and sequencing about 2,000 - 3,000 colonias in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5 primer and N(dT)14 as 3 primer. The PCR products were used as template for synthesis of blotinylated single stranded cDNAs propered from original libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method."

                                                                                                                                                                                                                                                                                                      ó
                                                          The present sequence was given in a specification relating to an isolated trat gangloside GM. I: specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNAC, a glycolippid, glycoprotein, glycolipportein or a free oligosaccharide comprising glycoprotein or a free oligosaccharide comprising propertien or a free oligosaccharide comprising alphal-2Galbetal-3GalNAC. The method involves contacting alphal-2Galbetal-3GalNAC. The method involves of a molecule or glycolippid, glycolipprotein or oligosaccharide having a terminal by contacting the protein with GDP-fucose and ganglioside GM. The by contacting the protein with GDP-fucose and ganglioside GM. The oligosaccharides are useful as nutritional compositions and fucosyl-GM. I suseful for inducing an immunocherapeut. Or immunosuppressive action against cancer, neurological disease or small cell lung carcinoma.
  useful as a nutritional composition neurological diseases -

The invention relates to rat GMI-specific alphal-2fucosyltransferase
(alphal-2FucT) enzyme and its corresponding nucleic acid. This nucleic
acid is specific for a carbohydrate moiety found in gangiloside GMI,
acid is specific for a carbohydrate moiety found in gangiloside GMI,
acid is specific for a carbohydrate moiety found in gangiloside GMI,
acid is specific for a carbohydrate moiety found in gangiloside GMI,
saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT
protein by recombinant techniques. Alphal-2FucT DNA is useful for the
preparative synthesis of fucosyl containing glycolippids, glycolproteins,
glycolipoproteins and oligosaccharide, and for preparing fucosyl-GMI.
Alphal-2FucT DNA is useful for detecting oncogenic transformation which
involves assaying for changes in expression of alphal-2 FucT. Since
alphal-2FucT is activated in cell transformation, antisense sequences
derived from alphal-2FucT DNA is useful in gene therapy and
cor treating cancer. Alphal-2FucT DNA is useful in gene therapy and
cor treating cancer harbal-2FucT DNA is useful in gene therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rat hepatoma H35 cell alphal-2fucosyltransferase, useful for producing GMI-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RDSEQHGNGELRGMFTINSIGRLGNQMGEXATLFALARMNGRLAFIPASMHNALAPIFRI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is given in a specification relating to a rat ganglioside GM 1-specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising fucalphal-2Galbetal-3GalNac, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNac. The method involves contacting alphal-1fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or oligosaccharide having a terminal Galbetal-3GalNac group. It is also useful for synthesis of fucosyl-GM_1 by contacting the protein with GDP-fucose and ganglioside GM_1. The obtained glycoproteins, glycolipide GM_1. The obtained glycoproteins, glycolipides and cligosaccharides are useful as nutritional compositions and fucosyl-GM_1 is useful for inducing an immunotherapeutic or immunosuppressive action against cancer, neurological disease or small cell lung carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New rat ganglioside GMI-specific alphal-2Fucosyltransferase, useful for preparation of fucosyl GMI which is useful as a nutritional composition or immunotherapeutic for cancer and neurological diseases -

The invention relates to rat GMI-specific alphal-2fucosyltransferase (alphal-2FucT) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GMI, a terminal galactose betal-3W-acceptygalactosamine (Galbetal-3GalNac) saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT protein by recombinant techniques. Alphal-2FucT DNA is useful for the preparative synthesis of fucosyl containing glycolipids, glycoproteins, glycolipoproteins and oligosaccharide, and for preparing fucosyl-GMI. Alphal-2FucT DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2FucT. Since alphal-2FucT DNA are useful for inhibiting, suppressing criticating cancer. Alphal-2FucT DNA is useful in gene therapy and antisense therapy. The present sequence is rat hepatoma H35 cell
                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     207

This polypeptide comprises porcine secretor glycosyltransferase

(SE or FUI2), a type II integral membrane protein has high affinity

(SE or FUI2), a type II integral membrane protein has high affinity

(SE or FUI2), a type II integral membrane protein has high affinity

(Cor type I and type III substrates. Its amino acid sequence was

deduced from the nucleotide sequence of a genomic DNA clone (see

AAV29003) isolated from a pig Ilver library on the basis of homology

Cor human FTD2 cDNA. Pig FUIZ shows 83.2% identity with human FUIZ.

Expression of a glycosyltransferase, such as porcine Se, in a

tissue results in reduced expression of unwanted carbohydrate

c pitopes on the tissue, especially porcine heart, liver, kidney or

pancreas, rendering if more suitable for transphantation, i.e. less

immunogenic and of increased immunological acceptability. A

claimed method of producing a cell from a donor species that is

immunologically acceptable to a recipient species sinvolves reducing

levels of carbohydrate on the donor cell that causes it to be

recognised as non-self by the recipient by expressing a nucleic

acid for a glycosyltransferase such as porcine Se in the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MASAQVPFSFPLAHFLIFVFVTSTIIHLQQRIVKLQPLSEKELPMTTQMSSGNTESPEMR 60

This sequence is the human Sec2 protein of the invention. The DNA encodes a alpha(1,2) fucosyltransferase and is the Secretor alpha(1,2) fucosyltransferase locus, that cross hybridises with the H blood group alpha(1,2)fucosyltransferase gene. The DNA is useful for producing a recombinant human GDP-L-fucose:beta-D-galactoside 2-alpha-L-fucosyltransferase (FUT2) which can be used for genotyping an individual as a secretor or nonsecretor as it is known that nonsecretors homozygous for a mutant allele of the FUT2 gene that has a stop codon in the position corresponding to amino acid 143.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents pig secretor used in an example of the present invention. The present invention describes nucleic acids (NA) encoding a chimeric glycosyltransferase. The NAs comprises a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the commerce as located in an area of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the present invention can be used to reduce the levels of undesirable epitopes in cells, tissues or organs which may be used in transplantation or gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIFASMHNALAPIFRI 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is given in a specification relating to a rat ganglioside GM_1-specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNRo. a glycolpid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNRo. The method involves contacting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein oligosaccharide having a terminal Galbetal-3GalNac group. It is also oligosaccharide having a terminal Galbetal-3GalNac group. It is also oligosaccharide having a terminal Galbetal-3GalNac group. It is also glycolipose and ganglioside GM_1. The obtained glycoproteins, glycolipids and oligosaccharides are useful as nutritional compositions and fucosyl-GM_1 is useful for inducing an nutritional compositions and fucosyl-GM_1 is useful for inducing an

The functional protein is represented by amino acids 33 to 365. The enzyme produced by the DNA sequence can be used in enzymatic fucosylation of chain-terminating galactose residues on lactosemine or neolacto type beta-D-galactoside to alpha-2-L-fucose residues. GDP-L-fucose-beta-D-galactoside 2-alpha-fucosyl-transferase (Fuc-T) is encoded by cDNA (AAQ98461) isolated from a human epidermal carcinome cell line. The enzyme is responsible for the synthesis of 2'-fucosyllactose, one of the oligosaccharides in human milk. Other products of Fuc-T include glycoprotiens contg. beta-linked terminal galactose residues which can be fucosylated by Fuc-T. This DNA can be used to produce non-human transgenic mammals able to produce secondary gene products, e.g. oligosaccharides, in their milk. The transgenic mammals milk biochemically resembles human milk. This humanised milk can be used in the prepn. of an enteral nutritional product useful in the nutritive maintenance of an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   117 IPRISLPVLHSDTAKKIPWQNYHLNDWMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEIL 176

                                                                                                                                                        2-Alpha-fucosyltransferase (AAR70422) is encoded by a cDNA clone (AAR01083) isolated from a human epidermal carcinoma A431 library. The enzyme can be expressed in the milk of a transgenic mammal, esp. cow. This allows large-scale prodn. of oligosaccharides and glycosylated proteins and lipids in the milk.

                                                                                                                                                                                                                                                            Alpha-1,2-fucosyltransferase (AAR70421) is encoded by a cDNA clone (AAT01082) isolated from a human epidermal carcinoma cell line A431 cDNA library. The enzyme can be expressed in the milk of a transgenic mammal, esp. cow. This allows large-scale prodn. of oligosaccharides or glycosylated proteins and lipids in the milk.

                                                                                                                                                                                                                                     The human H-transferase (AAR90572) product of a cDNA clone (AAT12238) prepd. from human epidermoid carcinoma cells (ATCC CRL 155 A-431) can be expressed in xenogeneic organs, tissues and cells using a vector such as pAPEx-1 (AAT1239). This results in decreased expression of the non-human antigen galactose alpha(1.3) galactose on the surface of the organs etc. so that hyperacute rejection is reduced upon transplantation to humans.

A claimed transgenic mouse expresses, in its intestinal epithelial cells, the enzyme human GDP-L-fucose.beta-D-galactoside 2-alpha-L-fucosyltransferase (also called alpha 1.2 FT) or human GDP-L-fucose.beta-D-N-acetylglucosamide 3/4-alpha-L-fucosyltransferase (also called alpha 1.3/4 FT). The enzyme is expressed under the control of a qut epithelial cell-specific promoter and Helicobacter pylori adheres to the transgenic cells. The transgenic mouse and intestinal epithelial cells from it are useful as models for screening compounds for the ability to inhibit adhesion of H. pylori to gut epithelial cells. The present sequence represents human alpha 1.2 FT and was published by Larsen et al., Proc.Natl.Acad.Sci.USA, 87:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           57 PEMRRDSEQHGNGELRGMFTINSIGRLGNQMGEYATLFALARMNGRLAFIPASMHNALAP 116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human GDP-Puc:beta-D-galactoside alpha(1,2)-fucosyltransferase (AAW13640) is an enzyme involved in the expression of type I and II blood group H structures. Its amino acid sequence was deduced from an isolated DNA (AATG1677) derived from human A431 cells. Expression of the fucosyltransferase animal cell lines provides specific capabilities with respect to post-translational modification of the oligosaccharides of expressed proteins or lipids. Specific applns. of the enzyme include enzymatic fucosylation of chain-terminating galactose residues on lactoseamine or neolacto type beta-D-galactoside to alpha-2-fucose residues. The enzyme can also be used to raise antibodies as diagnostic reagents and to screen cpds. for fucosyltransferase inhibitor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant fucosyltransferase proteins - useful for modifying cell surface oligosaccharide structures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   52.0%; Score 1057.5; DB 18; Length 365; 56.5%; Pred. Patent No. 6399758
GENERAL INFORMATION:
APPLICANT: SANDRIN, MAURO S.
APPLICANT: MCKENZIE, IAN C. F.
TITLE OF INVENTION: NUCLEIC ACIDS FOR REDUCING CARBOHYDRATE EPITOPES
FILE REFERENCE: 30562.50590
CURRENT APPLICATION NUMBER: US/09/254,077A
CURRENT FILING DATE: 1999-06-11
PRIOR APPLICATION NUMBER: PCT/AU97/00540
PRIOR PILING DATE: 1997-08-23
PRIOR PILING DATE: 1996-08-23
PRIOR PILING DATE: 1996-08-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  230 WFRARYSSLIFVVTSNGMAWCRENIDTSHGDVVFAGDGIEGSPAKDFALLTQCNHIIMTI
